PROFESSIONAL SUMMARY

Computer Science Engineering graduate (2026) with strong programming and technical fundamentals (Data Structures & Algorithms, OOP) and hands-on knowledge of the MERN stack (MongoDB, Express.js, React, Node.js), demonstrated by architecting a full-stack AI chat application end-to-end. Good working understanding of Python, gained through a Flask-based project and an ongoing Python Developer internship building REST APIs and reusable modules. Comfortable with Git/GitHub workflows, debugging, and problem-solving across full-stack projects — quick to learn new tools and document work clearly for a team.

TECHNICAL SKILLS

MERN Stack: MongoDB, Express.js, React, Node.js — REST API design, data modeling, full-stack architecture

Python: Flask, REST APIs, reusable modules — applied in a shipped project and an ongoing backend internship

Programming Fundamentals: Java, JavaScript, Data Structures & Algorithms, Object-Oriented Programming (OOP)

Databases: MongoDB, MySQL, SQLite

Tools & Practices: Git, GitHub, Postman, VS Code, debugging & troubleshooting, code reviews, testing

Core CS: DBMS, Operating Systems, Logical & Analytical Problem-Solving

INTERNSHIP EXPERIENCE

Python Developer Intern | Dhee Coding Lab *May 2026 – Present*

- Writing, testing, and debugging REST APIs and reusable Python modules — covering request/response structuring, data validation, and error handling.
- Following Git-based version control, code structuring, and documentation practices across self-directed project builds, strengthening core programming and problem-solving fundamentals.

Android App Developer (Gen AI) | MindMatrix VTU Internship Program *Feb 2026 – May 2026*

- Built a micro-finance digital ledger app (Kotlin, MVVM, Room DB) end-to-end, and communicated project architecture and progress through SOPs, internship diary documentation, and UI flow diagrams presented to mentors.

PROJECTS

JnanaGPT – AI-Powered Chat Application — *React, Node.js, Express, MongoDB, Gemini API 2026*

- Architected a full-stack MERN application — React frontend, Express REST API backend, and MongoDB data model — supporting real-time text/image generation and multi-session chat management.
- Integrated the Gemini API and handled testing, debugging, and UI/responsiveness fixes across the stack.

Chat-App – Real-Time MERN Chat Application — *React, Node.js, Express, MongoDB, Socket.IO, Cloudinary 2026*

- Built a full-stack real-time MERN chat app with JWT authentication, one-to-one messaging via Socket.IO, typing indicators, online/offline status, delivery/seen (blue tick) receipts, and Cloudinary-based image sharing.

VisionEye – AI Navigation System for the Visually Impaired — *YOLOv8, Python, Raspberry Pi 2025 – 2026*

- Integrated a YOLOv8 object-detection model (Python) with GPS and ultrasonic sensors on Raspberry Pi to deliver real-time obstacle alerts and voice guidance.

EDUCATION

Bachelor of Engineering – Computer Science & Engineering *2022 – 2026*

Sir M Visvesvaraya Institute of Technology, Bengaluru, Karnataka | CGPA: 8.6

ACHIEVEMENTS & EXTRACURRICULARS

- Winner (1st Place), Hackspark Hackathon SVCE 2025 — built a real-time violence detection system end-to-end in 8 hours, shipping independently under time pressure.
- Winner, Innovista 2026, Sir MVIT.
